2709-Pipeline Awareness

This Pipeline Awareness program gives an emergency responder information on what purposes a pipeline serves, where pipelines may be located in their community, how to identify a pipeline right of way, how to read and interpret pipeline markers, and the important role the Pipeline Control Center plays during an emergency. Responder actions at the awareness level, from the initial call of a pipeline emergency to actions needed on-scene to maintain and control public safety, will be discussed.

This four-hour program is available in five different locations around South Carolina and is presented by SC Fire Academy instructors, as well as leading industry personnel. The cost is \$5/student and there are no prerequisite requirements.
